

**3D
MAMMOGRAPHY**
IS HERE.

Now we can find cancer at its earliest, most treatable stage.

We can't prevent breast cancer. But if we find it early enough, we may be able to stop it, before it stops you. 3D mammography makes it much easier for our doctors to see if there's anything to be concerned about – when we have a much better chance at stopping cancer in its tracks.* **Call us today to learn more and schedule your annual mammogram (360) 254-4914.**

*A breast tomosynthesis exam may be used as a screening tool in conjunction with a traditional mammogram, or may be used by itself for a diagnostic mammogram.
